I MACINTOSH POWERPC (1994-2005)

Macintosh New World

*Architecture upgrade in January 2001 **Architecture downgrade in June 2003

- Cont. from "Old World" timeline
- Power Mac G3/Server
- Power Mac G4/Server
- Power Mac G5
- Special models

UBUNTU : L'IDEALE PER MACCHINE NEWWORLD POWERPC

- Installazione semplice
- Pieno supporto (a differenza di Leopard/Snow Leopard)
- Funzionamento di schede PCI non dichiarate per Mac (ad esempio USB,TV...)
- Supporto di volumi superiori a 128 GB anche su vecchi PowerMac

Select an image

Ubuntu is distributed on three types of images described below.

Desktop CD

The desktop CD allows you to try Ubuntu without changing your computer at all, and at your option to install it permanently later. This type of CD is what most people will want to use. You will need at least 256MB of RAM to install from this CD.

There are two images available, each for a different type of computer:

[Mac \(PowerPC\) and IBM-PPC \(POWER5\) desktop CD](#)

For Apple Macintosh G3, G4, and G5 computers, including iBooks and PowerBooks as well as IBM OpenPower machines.

[PlayStation 3 desktop CD](#)

For Sony PlayStation 3 systems. (This defaults to installing Ubuntu permanently, since there is usually not enough memory to try out the full desktop system and run the installer at the same time. An alternative boot option to try Ubuntu without changing your computer is available.)

Desktop image

The desktop image allows you to try Ubuntu without changing your computer at all, and at your option to install it permanently later. This type of image is what most people will want to use. You will need at least 256MB of RAM to install from this image.

There is one image available:

[i.MX51 Babbage desktop image](#)

For i.MX51 Babbage boards.

Server install CD

The server install CD allows you to install Ubuntu permanently on a computer for use as a server. It will not install a graphical user interface.

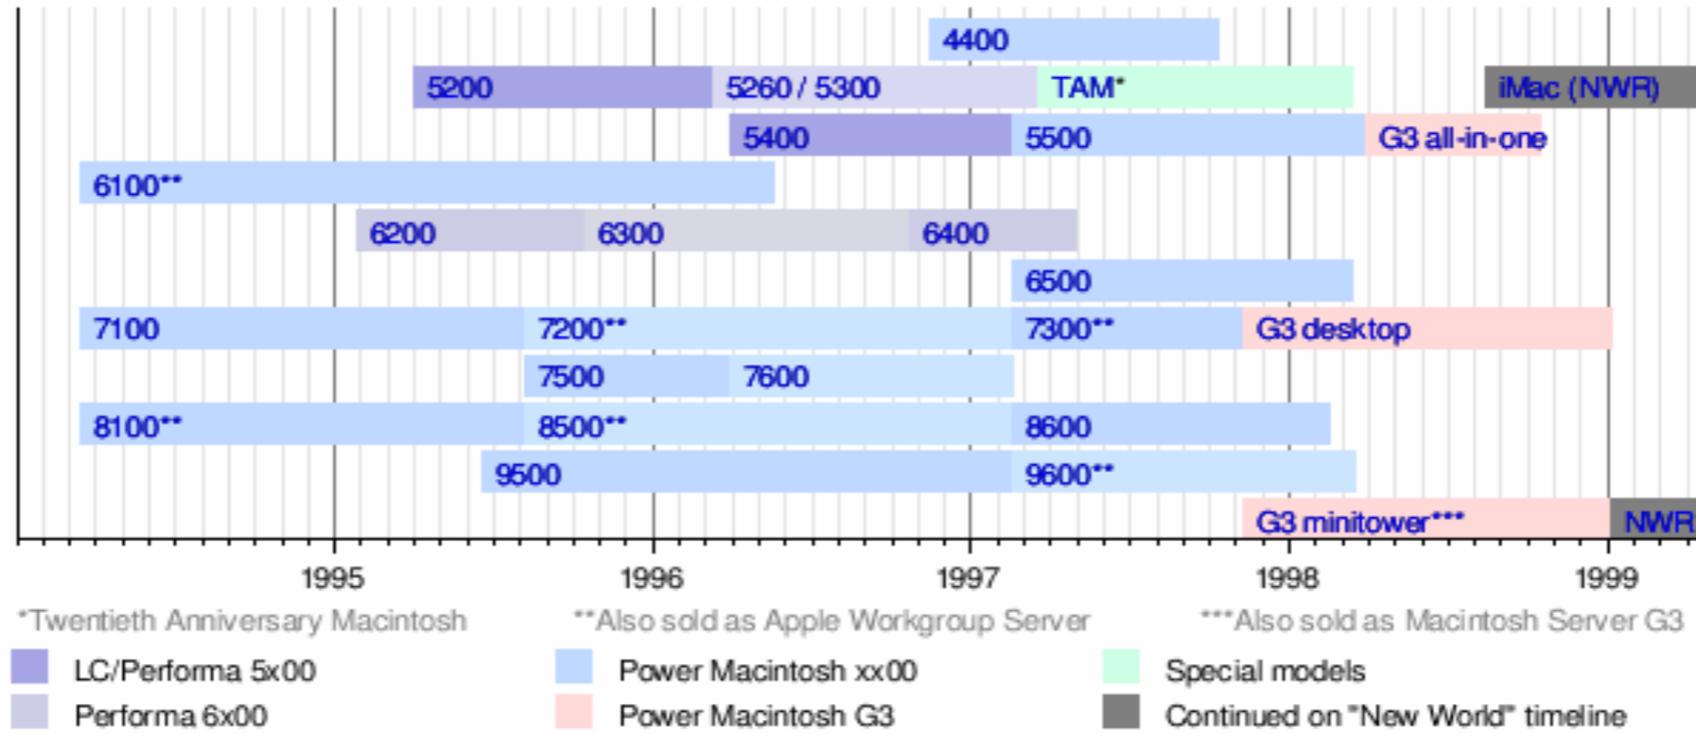

There are five images available, each for a different type of computer:

[Mac \(PowerPC\) and IBM-PPC \(POWER5\) server install CD](#)

For Apple Macintosh G3, G4, and G5 computers, including iBooks and PowerBooks as well as IBM OpenPower machines.

[HP PA-RISC server install CD](#)

Vine Linux 4.2

Vine Linux is a compact and lightweight Japanese Linux distribution for desktop PCs and notebooks. The whole Vine Linux distribution consists of one CD install media (Vine Linux main), as well as additional package collections (Vine Plus). Vine Linux is an rpm-based distribution with apt-rpm powered, which helps easy and straightforward package managements.

Vine Linux 4.2 runs on Intel PC (ix86) and PowerPC Macintosh (ppc).

Join us now, and make our Vine Linux more comfortable together!

Vine Linux : Guida all'installazione su Mac PPC

1) Procuratevi la .ISO della distribuzione (ad esempio [qui](#)) e masterizzatela con un comune programma di masterizzazione.

2) Preparazione lo spazio per l'installazione

Vine Linux può essere installato sul disco rigido , è richiesto solo lo spazio per creare una nuova partizione (per un'installazione con sufficienti applicazioni almeno 2 GB). Mac OS / Mac OS X è preinstallato quando si acquista un computer Macintosh. Si prega di prenotare lo spazio per l'installazione in uno dei seguenti metodi:

1. Da Linux, lasciando spazio per Mac OS / Mac OS X per essere reinstallato .
O da MacOS/MacOSX far partire il CD/DVD di installazione e ripartizionare il disco lasciando lo spazio per Linux.
2. Aggiungere un nuovo disco
3. Linux utilizza una macchina dedicata (il contenuto del disco rigido è stato rimosso)

3) Avvio dell'installazione

Nel caso di un Macintosh New World , inserite il CD-ROM di Vine Linux Vite e riavviate. Dopo il riavvio tenete premuto il tasto C, dovrebbe avviarsi il programma di installazione, apparirà il prompt boot: .

Basta premere Invio per avviare l'installazione grafica.

Se non si avvia l'installazione grafica, provare con l'installazione testuale :

boot: linux text

Se è un Macintosh OldWorld è necessario ricominciare da capo. Bisogna bootare da MacOS , poi inserire il CD-ROM di Vne Linux poi copirare i seguenti file sul disco rigido.

- Boot VineLinux → nella cartella "Pannello di controllo"
- BootX Extension → nella cartella → "Estensioni"
- BootX Settings → nella cartella "Preferenze"
- la cartella Linux Kernels → nella cartella di sistema
- ramdisk.image.gz → Nella cartella Sistema

Poi, quando si riavvia la macchina, durante l'avvio di Mac OS apparirà BootX con la scelta del sistema operativo già impostata su Linux. Premere Invio e si avvierà l'installazione di Linux.

Appendice : errori in fase di primo boot

- In caso di errore "Unable to resolve LABEL=/" consultare questa [guida](#)

- In caso di errore "bonobo-activation-server" all'avvio di Gnome consultare [qui](#) o comunque verificare l'ora di sistema riavviando in MacOS Classic.

Classilla

Building a secure browser for classic Mac OS

It's only a fossil.

[Download Now!](#) | [Google Code](#) | [Classilla Wiki](#) | [Report-A-Bug](#)

Classilla is a free, open source browser for Mac OS 9*

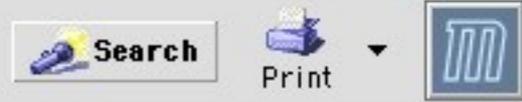

Classilla is bringing back web browser support to your classic Macintosh -- built on WaMCom, a port of [Mozilla](#) to classic Macintosh systems, using the same technology underpinning the popular Firefox browser. It's completely free and it's open source, and it's standards-compliant. Use it without cost or restriction; or, if you've got the skills, hack it and make it your own. Classilla brings your wonderful old Power Macintoshes back to life and back online.
